**Bloodstream** - Tess Gerritsen 2010-07-20 With her acclaimed novels Harvest and Life Support, Tess Gerritsen has injected a powerful dose of adrenaline into the medical thriller. Now, in a new blockbuster, Gerritsen melds page-turning suspense with chilling realism as a small-town doctor races to unravel the roots of a violent outbreak -- before it destroys everything she loves. Lapped by the gentle waters of Locust Lake, the small resort town of Tranquility, Maine, seems like the perfect spot for Dr. Claire Elliot to shelter her adolescent son, Noah, from the distractions of the big city and the lingering memory of his father's death. But with the first snap of winter comes shocking news that puts her practise on the line: a teenage boy under her care has committed an appalling act of violence. And as Claire and all of Tranquility soon discover, it is just the start of a chain of lethal outbursts among the town's teenagers. As the rash of disturbing behavior grows, Claire uncovers a horrifying secret: this is not the first time it has happened. Twice a century, the children of Tranquility lash out with deadly violence. Claire suspects that there is a biological cause for the epidemic, and she fears that the placid Locust Lake may conceal an insidious danger. As she races to save Tranquility -- and her son -- from harm, Claire discovers an even greater threat: a shocking conspiracy to manipulate nature, and turn innocents to slaughter.

Ecology of Freshwaters - Brian R. Moss
2018-04-23 The new edition of this established textbook, now with full colour illustration, has been extensively revised and continues to provide a comprehensive, stimulating, readable and authoritative coverage of freshwater habitats, their communities and their functioning, the world over. The work will be of great value to undergraduate and graduate students, fellow researchers and water managers, and the plain language and lack of jargon should make it accessible to anyone interested in the functioning and current state of lakes and rivers. Having taught and researched over fifty years and six continents, Professor Brian Moss makes here extensive use of his personal experience as well as the huge literature now available on freshwaters. This is the fifth edition of his textbook, which, since the first edition in 1980, has steadily evolved to reflect a rapidly changing science and environment. It places increasing emphasis on the role of people in damaging and managing freshwaters as we move into the Anthropocene epoch and face unprecedented levels of climate and other changes, whilst rejoicing in the fascination of what are left of near pristine freshwater ecosystems. Professor Moss retired from the University of Liverpool following a career in Africa, the USA and the UK. He was awarded medals by the International Society for Limnology, of which he was President from 2007 to 2013, and The Institute of Ecology and Environmental Management. He was given The Ecology Institute's Excellence in Ecology Prize in 2009 and the book written for that prize, Liberation Ecology, was awarded the British Ecological Society's best ecology book prize in 2013.

Elucidating the Structure and Kinetics of the Apocytochrome B MRNA/gRNA Complex
Quantitative Fundamentals of Molecular and Cellular Bioengineering-K. Dane Wittrup 2020-01-07 A comprehensive presentation of essential topics for biological engineers, focusing on the development and application of dynamic models of biomolecular and cellular phenomena. This book describes the fundamental molecular and cellular events responsible for biological function, develops models to study biomolecular and cellular phenomena, and shows, with examples, how models are applied in the design and interpretation of experiments on biological systems. Integrating molecular cell biology with quantitative engineering analysis and design, it is the first textbook to offer a comprehensive presentation of these essential topics for chemical and biological engineering. The book systematically develops the concepts necessary to understand and study complex biological phenomena, moving from the simplest elements at the smallest scale and progressively adding complexity at the cellular organizational level, focusing on experimental testing of mechanistic hypotheses. After introducing the motivations for formulation of mathematical rate process models in biology, the text goes on to cover such topics as noncovalent binding interactions; quantitative descriptions of the transient, steady state, and equilibrium interactions of proteins and their ligands; enzyme kinetics; gene expression and protein trafficking; network dynamics; quantitative descriptions of growth dynamics; coupled transport and reaction; and discrete stochastic processes. The textbook is intended for advanced undergraduate and graduate courses in chemical engineering and bioengineering, and has been developed by the authors for classes they teach at MIT and the University of Minnesota.

Bloodstream-August Franz 2009-09 BLOODSTREAM is a brutal and moving novel about family conflict, bitterness, and misery. It contains violent language, violent behavior and violent sex. It recounts the angry disputes and bitter fighting that haunt the Croce family. BLOODSTREAM focuses on Frankie, the oldest son, who suffers the most abuse at the hands of his father. From childhood through adolescence and into adulthood, Frankie tries to fight off his father’s wrath and violence but he is impotent against him. As a result, Frankie turns, in desperation, to drugs, crime, deceit and betrayal. As he slowly comes to realize that there is no escape, he resorts to the only solution that will finally rid him of his overwhelming burdens.

Caffeine for the Sustainment of Mental Task Performance-Institute of Medicine 2002-01-07 This report from the Committee on Military Nutrition Research reviews the history of caffeine usage, the metabolism of caffeine, and its physiological effects. The effects of caffeine on physical performance, cognitive function and alertness, and alleviation of sleep deprivation impairments are discussed in light of recent scientific literature. The impact of caffeine consumption on various aspects of health, including cardiovascular disease, reproduction, bone mineral density, and fluid homeostasis are reviewed. The behavioral effects of caffeine are also discussed, including the effect of caffeine on reaction to stress, withdrawal effects, and detrimental effects of high intakes. The amounts critical condition from a possible viral infection of the brain. The delirious man barely responds to treatment—and then disappears without a trace. Before Toby can find him, a second case occurs, revealing a terrifying fact: the virus can only be spread through direct tissue exchange. Following a trail of death that winds from a pregnant sixteen-year-old prostitute to her own home, Toby discovers the unthinkable: the epidemic didn’t just happen—someone let it loose....

**Sinister Games: Bloodstream Volume Two** - Katze Snow 2018-10-30 When Vincent sold himself to a vampire, he did not expect to become the slave of Maddox Caine. Now struggling to accept the feelings of passion he's grown toward his master, he's agreed to follow Maddox into a war he never knew existed. This is what he's been waiting for: to fight, to avenge, and to win. But what happens when another vampire threatens to put Vincent's heart, not just his loyalties, to the test? Emory Hudson was never meant to live past childhood. His uncle managed to save his life at every turn, but now Emory finds himself alone, on the desert, with an enemy claiming to be his ally. They both seek the one thing that can be fatal to a First Born vampire. Paired with this unexpected accomplice, Emory scours the Wastelands in search of the poisonous flower. No matter what the sacrifice, he will kill the Governor of Sanctuary Hope and save his uncle. It's the least he can do. In this depraved and desolate world, can Vincent learn to see that there is more to vampires than an insatiable desire for blood? Will Emory free his uncle before the war divides them forever? WARNING: This world is a treacherous place. Creatures have evolved into unforeseen habitats, and beyond the elusive Sanctuary Cities, human survivors have been reduced to nothing more than bloodthirsty maniacs. It is not for the faint-hearted and due to the extreme level of high heat, it is for mature audiences only. This series will only get darker and better.

Core Concepts in Clinical Infectious Diseases (CCCID)—Carlos Franco-Paredes 2016-03-16 Core Concepts in Clinical Infectious Diseases (CCID) provides medical students and researchers, infectious disease fellows, and practicing clinicians with key clinical concepts in the differential diagnosis and workup of infectious diseases. With the use of tables, charts, and problem-oriented medical diagnosis, it will provide a way of organizing and thinking about commonly seen clinical presentations of infectious diseases. Instead of discussing each disease process or any particular infectious process, this book will assist clinicians in seeing the forest and not focusing on the leaf. Graphs and tables have been constructed over 14 years of taking notes, teaching clinical infectious diseases, and discussing real clinical cases. This book is not about acquiring the structure of infectious diseases that is presented in classic textbooks of infectious disease; instead, it is about refining the process of putting the pieces together in clinical thinking to achieve an accurate clinical diagnosis and thus improved patient care. Assists the reader in connecting the dots (process of accumulating real-time knowledge) during the thinking process of clinical decision-making in the area of infectious diseases Uses tables and charts for easy understanding and application Contains a manual style that targets different audiences, such as medical students, hospital medicine specialists, outpatient internal medicine practitioners, infectious disease fellows in training, and practicing clinicians Provides an up-to-date discussion of core concepts in clinical infectious diseases

Bloodstream—Robert Steurich 2013-12-16 Searching for a father he never knew, a young man and his fiance travel to Mexico and soon find themselves trapped in a town of werewolves and vampires. Progress is blocked by deceptive townspeople and injuries suffered from an attack that leaves them confused and unable to realize the extent of their danger. To survive and escape, they must summon strengths beyond their comprehension. If they survive, their experiences may leave them with more than memories.

A Comparison of the Rate of Central Line-Associated Bloodstream Infection (CLABSI) in a NICU Pre- and Post-Implementation of Sterile Tubing Change—Nicole Sanders 2013 Central line-associated blood stream infections (CLABSI) are health care associated infections (HAI) that are serious but preventable adverse events. Implementation of care bundles, quality improvement projects, and education have been successful in decreasing rates of CLABSI in all intensive care units (ICU). PURPOSE: The purpose of this project was to compare the rate of central line associated blood stream infection (CLABSI) in a Midwestern Neonatal Intensive Care Unit (NICU) pre- and post-implementation of sterile tubing change. METHODS: A descriptive retrospective non-experimental study design was used to report CLABSI rates of a Midwestern NICU before and after implementation of a care bundle. Data was collected by retrospective chart review of NICU patients with birth weights less than 1500 grams. Results were obtained quarterly, from the first quarter of 2007 to the fourth quarter of 2012. CLABSI rates were compared over this six-year period. RESULTS: The rate of CLABSI in this NICU decreased from 6.0 bloodstream infections per 1000 central line days in 2007 to 0.8 bloodstream infections per 1000 central line days in 2012. CONCLUSIONS: The decrease was in response to care bundle components implemented in 2010 and 2011 including sterile tubing change. The results have shown the effectiveness of a care bundle including sterile tubing change, in decreasing CLABSI in this NICU.
